

A new development in the tray sealing technology allows to create a MAP protected package with a rigid lid inside and totally enclosed into the sealed pack, which also grants the recloseability of the pack. The combination of this system with the use of an injected moulded tray allows to create a functional packaging, increasing the convenience and the quality perception of the finished pack.

✓ Reclosable lid, totally enclosed into the tamper proof package

✓ Better pack appearance

✓ Eliminates the risk of missing lids on the shelves

✓ MAP protected

Assembling line

Like in many other applications, G. Mondini takes care of the whole assembling line as a complete and integrated system starting from the tray denester up to the tray sealer, including the automatic insertion of the lid into the tray.

G. Mondini provides overall solutions for a range of outputs going from 20 to 200 trays per minute.

Tray sealer

Considering that this is an application mainly related to the sealing tool and this technology has been mainly developed inside the sealing tool itself, this system can be applied to all the Mondini machines.

Reclosable Lid

- Enhanced pack appearance

- This solution eliminates the risk of missing lids during the logistics.

- The placement of the lid inside the tray grants a good recloseability, thanks to the conical shape of the lid.

Functional Lid

- Totally enclosed recloseable insert for a neater pack appearance.
- Functionality of the insert can be varied according to the type and needs of the specific product.
